## Step 1 — Back Panel

- Insert a plastic opening tool between the plastic panel shown on the device.

- i** There will be adhesive holding this piece of plastic to the device. You may have to pull pretty hard to get it separated.

## Step 2

- Use an aluminum driver attached with a Phillips head size #00 to remove the four 3mm screws shown in the picture.

## Step 3

- Once the screws are removed, the back panel can slide off the device.

## Step 4

- Remove the magnetic component with the magnetic head of the aluminum driver.

## Step 5 — Screen

- Use a spudger to push up the black tabs on all three ribbon cables.
- Once the tabs are open, gently pull the ribbon cables out of their housings.

## Step 6

- Insert a plastic opening tool into the small crack between the screen and the front panel.
  - Work your way around the screen until you can pry it all the way open.
- i** There is adhesive holding the screen to the front panel, so you will need to apply some pressure to completely separate the two.

## Step 7

- Once the screen is free of the front panel, pull the loose ribbon cables through the openings in the bottom of the screen.
- Lift the screen off of the front panel.

To reassemble your device, follow these instructions in reverse order.
